

# Cable Tidy Rings

The unique integrated cabling ring offers improved patch lead management when used with Connectix cabling system patch panels.

The adjustable rings slide into a specially designed slot on the front of the patch panels, providing excellent patch lead management and removing the need for separate cable tidy panels.

The rings can be positioned horizontally or vertically resulting in neat professional installations where none of the network equipment is obscured by patch leads.

Cabinet space is also optimised by removing the need for additional cable tidy or jumper ring panels. This can equate to a saving of up to 50% of valuable cabinet space.

Blank panels are also available allowing the same versatile rings to be used in more traditional jumper ring panel format.

## Features & Benefits

- ✕ Excellent patch lead management
- ✕ No need for additional cable tidy or jumper ring panels
- ✕ Vertical or Horizontal cable routing with one product
- ✕ Maximises cabinet space
- ✕ Standard rings hold up to 24 cables
- ✕ Unique Patented system
