

# Labelling Machines

## Features & Benefits

- ✘ Ideal for producing designation labels
- ✘ P-Touch 1250 and 65 are hand held units, ideal to take on site
- ✘ All units print vertically and horizontally
- ✘ Quick and simple to use
- ✘ Wide range of tapes available

Connectix offer a range of labelling products, giving you a flexible approach to designating your cabling systems. Labels created on these units are perfect for Connectix Cabling System panels, modules and cabinets.

The Brother P-touch labelling machines are available in three different models.

The P-Touch 2500PC links to a PC, so labels can be created at a desk, and saved for re-use. It prints on a wide variety of tapes ranging from 6mm up to 24mm with 21 varieties of tape available, it is possible to devise colour schemes that can simplify labelling of installations especially in large buildings with many floors. Printing can be both horizontal and vertical.

The P-Touch 1250 and 65 are battery operated hand held units, which makes them ideal to take out on site. These two units are quite similar, however the P-Touch

1250 has more advanced features than the P-Touch 65. The P-touch 1250 can print on 6mm, 9mm and 12mm wide tapes, including laminated tape. It has a 300 character memory, can print horizontal and vertically. It types in Helsinki font and has 6 type sizes and 9 type styles.

The P-Touch 65 prints on 9mm and 12mm wide tape. It types in Helsinki font and has 5 type sizes and 9 type styles it has 180 characters and symbols that can be mixed and matched with the sizes and styles available. Both units are supplied with mains adapters and come in handy carry cases.
