

Connectix Home Cabinet

The Connectix home cabinet has been designed to be the heart of a state of the art home networking system; housing all the core equipment and wiring terminations.

The system allows the distribution of Voice, Data, ISDN, Internet Connection, TV, Video and CCTV around the home. It has the capacity for up to 10 units from the range of: 12 way RJ45 panels; telephone host panels; blank panels (to allow for future technology); TV distribution input and output units and whole house audio unit along with a specially designed shelf to house a 5 port Networkx Palm switch.

There is an enclosed section to house a 4-way power unit from which all the internal equipment can be supplied. Other leads and incoming cables can be routed neatly into an enclosed section on the other side of the unit.

Access to the cabinet is made easy with the flap down front door, which for added security has been fitted with a key lock.

The cabinet is the ideal size to fit neatly into a cupboard under the stairs, garage or utility room, and the compact design and stylish finish means the unit will not look out of place in a variety of locations.

Features & Benefits

- ✕ Houses the core home networking equipment
- ✕ Discreet stylish design
- ✕ Capacity for future upgrades
- ✕ Integrated internal power supply
