2 glands in/2 out break out box	009-007-002-14
2 glands Same end break out box	009-007-002-02

The Optix range of wall mountable break out boxes are designed to provide a very cost effective method of patching or splicing in situations where equipment racks or cabinets are not available.

The break out boxes are available in tough and lightweight ABS or Mild Steel for more demanding situations.

These boxes can be supplied fully loaded with all common adaptors including ST, SMA, SC, FC, SC Duplex, FDDI and ESCON types. They are supplied in a number of popular formats including 1in/1out, 1in/2out and 2in/2out. We provide a custom machining service enabling us to supply any other splice box configuration or hybrid enclosures on very short lead times.

All enclosures are offered with full fibre / splice management kit options and are available from stock.
