

Termination Kit & Fiberscope™

Features & Benefits

- ✕ Includes Optix Fiberscope™
- ✕ Supplied in rugged, durable flightcase
- ✕ Everything you need in one box
- ✕ Consumables can be supplied individually
- ✕ A third of the cost of industry standard microscopes
- ✕ Perfect vision of ferrules
- ✕ Handheld and lightweight
- ✕ Includes backlight facility
- ✕ Supplied ready to use
- ✕ Robust metal construction

Whether termination procedures are taking place on-site or in production facilities, the Optix Termination Kit provides all the necessary equipment and consumables for manufacturing cabling assemblies and terminating cables.

The kit consists of an Optix Fiberscope™, Fibretron Curing Oven, Crimp Tools, Termination Epoxies, Polishing Tools and Health & Safety Equipment.

The kit is supplied in a rugged flight case, resistant to demanding on-site working conditions. Optix Termination kits are available from stock with replacement consumables available individually.

The Optix Fiberscope™ is the ideal instrument for carrying out the necessary visual checks on a fibre optic ferrule.

Designed to be a handheld and lightweight optical microscope, the Fiberscope™ is available in four styles - 100, 200, 320 and 400 times magnification. The Fiberscope™ is manufactured with a robust metal construction. This optical microscope provides a clear central focus - eliminating the need for alignment. The Fiberscope™ also includes a backlight facility, enabling the user to illuminate the fibre core and check for scratches, cracks and other impurities. A choice of universal or dedicated adaptors can be supplied and the Fiberscope™ is available as part of the Optix Termination Kit.
